

## *Your interface to lifelong learning: learning management system – .lms*

**brainshuttle™.lms** is a modern web-based, platform-independent learning management system that provides learners with an easy-to-use, intuitive and interactive learning environment.

The **brainshuttle™.lms** is based on an open source learning management system and can be applied in various learning contexts - ranging from basic education to vocational training, academic education and even industry training. **brainshuttle™.lms** supports self-paced as well as instructor-led e-learning and can be utilised in blended learning approaches, too. It provides a number of communication features such as messages, chat, discussion boards to enable direct contact between learners as well as quick communication with the trainers.

**brainshuttle™.lms** allows users to organise and access online learning content. It is customisable and can be rolled out as a self-hosted, or cloud-based solution. The comprehensive rights management supports a detailed configuration of roles and the user account management can be easily integrated with educational management information systems.

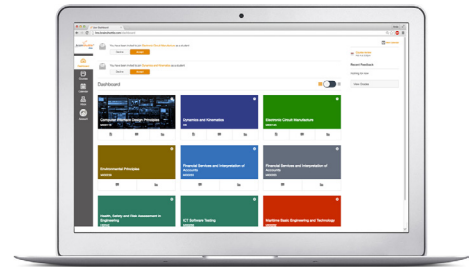

- ✓ Web-based and platform-independent learning management system meeting the latest web and e-learning standards
- ✓ Simple organisation and presentation of online learning content
- ✓ Accessible administration of user accounts, modules, roles
